## ICC Profile Installation and Printing Guide - when using Photoshop

1. Download appropriate file from .....
2. Close Photoshop - profiles will not appear if installed when Photoshop is running.
3. Place the profile in the appropriate folder on your computer system.

For Mac OS X : Macintosh HD - Library - ColorSync - Profiles.

For Windows XP : C:\Windows\System32\Spool\Drivers\Color

4. Launch Photoshop and select your file for printing.
5. In the Print With Preview Screen
  - Select "Show More Options".
  - Choose "Colour Management" in the pull down menu.
  - Select document with your current work space Profile
  - In XP and Vista Under "Colour handling" select "Let Photoshop determine colours".
  - By the Profile option select your "Installed Profile" .
  - Select "Perceptual" as the "Rendering Intent".
  - "Black Point Compensation" should also be selected.
6. Select Page Setup..
7. Select Printer.
8. Choose the printer that you are using and select "Properties".
9. **IMPORTANT** For Custom Profiles - Select the same settings and media on your printer as you did when printing the target charts.
10. Finally accept your settings and print your image .

### Special Note:

These profiles are provided to help produce superior reproduction to the available settings in your printer driver for Paper spectrum ink-jet media. The perception of the quality of the results is affected by many things, including input profile, image content, viewing conditions and subjective preferences.. Due to these influences minor colour adjustments to your files may still be necessary.
